Air Spring Components

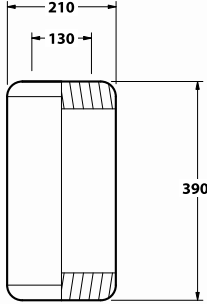

- 1. Stud.** A permanent part of the bead plate assembly used to attach the air spring to the suspension (Shown as ●).
- 2. Combination Stud.** This provides a dual purpose of mounting the air spring to the suspension and providing an air entrance (Shown as ⊙).
- 3. Blind Nut (Threaded Hole).** A permanent part of the bead plate assembly providing an alternative mounting system to the Stud (Shown as ⊙).
- 4. Air Fitting Hole.** A tapped hole providing air entrance for the part. (Shown as ⊗).

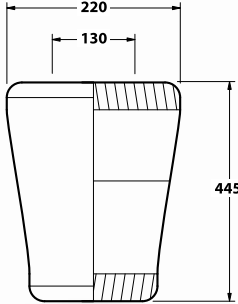

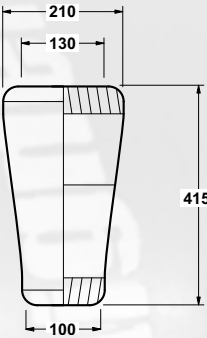

- 5. Bead Plate (Top Plate).** Permanently crimped onto the bellows, diaphragm during manufacture.
- 6. Bellows.** The heart of the airspring. Includes at least four ply, or layers of material - an inner layer, two ply of cord reinforced fabric and an outer layer.
- 7. Bumper (Bump Stop).** A solid moulded rubber fail safe device used on many suspension applications. Prevents excessive damage to the vehicle and suspension in the case of sudden air pressure loss.
- 8. Piston.** The lower section of the airspring made from aluminium, steel or composite material ie. plastic. Provides lower mounting arrangement for the airspring in the form of threaded holes or studs.
- 9. Piston Bolt.** Attaches the piston to the bellows assembly and in some cases is extended to serve as a means of attaching the airspring to the suspension.
- 10. Girdle Hoop (Centre Ring).** A ring between the convolutions of the convoluted type air spring, helps provide stability in the part.
