## ABOUT US / HAKKIMIZDA

Ege Fren A.Ş., a Joint-Venture company of Bayraktar Group and world's one of the leading automotive system suppliers Meritor, was established in the year of 1987 in İzmir. We are serving many commercial vehicle manufacturers both in Turkey and abroad with the design and production of brakes & brake components. Beside Turkey, Ege Fren brand is being accepted as the quality and service symbol in the various regions of the world such as America, Europe, Asia, Middle East and Africa.

Ege Fren A.Ş., ülkemizin önde gelen gruplarından Bayraktar Holding ve dünyanın en önemli otomotiv sistem tedarikçilerinden Meritor firmalarının 1987 yılında İzmir'de kurdukları, Türkiye ve yurtdışındaki birçok ticari araç üreticisi için fren sistemleri ve komponentleri tasarlayan ve üreten ortaklığıdır. Ege Fren markası Türkiye'nin yanısıra, Amerika, Avrupa, Asya, Ortadoğu ve Afrika gibi birçok coğrafyada kalite ve hizmet simgesi olarak kabul görmektedir.

## BRAKE TYPES / FREN ÇEŞİTLERİ

## HOW IT WORKS. (DISC BRAKE)

The air actuator is attached to the brake housing and operates directly onto the internal operating shaft assembly, thus removing the necessity for the conventional external lever and linkage arrangement. Sealing between the air actuator and housing is achieved by seals located in the housing and actuator assembly. The carrier, secured to the vehicle, straddles the rotor and supports the brake pads. The housing assembly slides on two fully sealed guide sleeves bolted to the brake carrier. As the pads wear, adjustment takes place automatically and independently of load.

The force introduced from the air actuator is amplified by the geometry of the operating shaft. This clamping force is transferred to the inboard pad via the half-bearings, the rollers, the tappets, the pistons and the Piston Heads. Once the inboard pad has been applied against the rotor, the force of reaction acting through the housing and bridge pulls the outboard pad on to opposite side of the brake rotor. The forces created by the friction of the brake pads on the brake rotor are transferred at the ends of the pads on to the carrier, which is rigidly mounted to the axle.

## DİSK FREN NASIL ÇALIŞIR ?

Havalı disk fren; taşıyıcı, köprü, kaliper, hava körüğü, rotor ve balatalar olmak üzere altı ana parçadan oluşur. Hava körüğünden gelen tahrik, körük itici milini hareket ettirerek levveyi döndürür. Levye, piston çiftini ileri doğru hareket ettirerek balatayı diske temas ettirir. Köprü - kaliper sistemi, taşıyıcı üzerinde kayarak, balataların rotora çift taraflı baskı uygulamasını sağlar.

Otomatik ayar mekanizması; balataların, fren kullanımına bağlı olarak aşınması sonucunda, rotor yüzeyi ile balata arasında oluşacak boşluğu giderek, rotor - balata arasındaki mesafenin sürekli olarak sabit kalmasını sağlar.

Bu frenlerde kullanılan hava körükleri, servis ve imdat tipi olmak üzere iki çeşittir. Servis tipi hava körüğü, sadece ayak freni uygulamasında, imdat tipi hava körüğü ise hem ayak hem de park freni (el freni) uygulamalarında kullanılır.
